B.Sc. Computer Science
Bina Nusantara University
2015 – 2019

PROFESSIONAL SUMMARY

Software Engineer with 7+ years of professional experience building enterprise-grade web applications across fintech, e-commerce, and banking. Frontend-leaning Full Stack specialist with deep expertise in React, Next.js, and TypeScript, complemented by Go and Node.js on the backend. Proven track record delivering for regional and global brands including DBS Bank Singapore, Tokopedia, and Modal Rakyat. Known for clean architecture, fast iteration, and reliable delivery in Agile teams.

PROFESSIONAL EXPERIENCE

Software Engineer — Jaya Agung Teknologi

January 2024 – Present

- Develop and maintain enterprise-level internal systems using React.js, Next.js, Go, TypeScript, and TailwindCSS.
- Lead migration of legacy codebases to modern stacks, improving maintainability and reducing technical debt.
- Build new system features end-to-end, from API design in Go to responsive frontend implementation.
- Resolve production bugs and contribute to incident response in a fast-paced Agile/Scrum environment.
- Mentor newer team members on React patterns, TypeScript best practices, and code review standards.

ReactJS Developer — DBS Bank Singapore (via Beyondsoft)

June 2022 – December 2023

- Delivered frontend features for DBS Bank Singapore as part of the Transformers Squad, contributing to one of Southeast Asia's largest digital banking platforms.
- Built and maintained production interfaces using React.js, TypeScript, and SASS, with strict adherence to banking-grade quality and security standards.
- Migrated legacy frontend modules to modernized React/TypeScript implementations, improving consistency and developer velocity.
- Diagnosed and resolved production bugs across complex banking workflows, partnering with QA and backend teams.
- Operated in an Agile/Scrum environment with Kanban boards and daily stand-ups across a distributed regional team.

Software Engineer — Web Platform — Tokopedia

March 2021 – May 2022

- Engineered features for the Home and Search division of Indonesia's largest e-commerce platform, serving millions of users daily.
- Implemented UI components in React.js with React Testing Library coverage and SASS for styling.
- Collaborated cross-functionally with product, design, and backend teams in an Agile/Scrum setup.
- Owned end-to-end feature delivery, from technical specification through production rollout.

Software Engineer (Frontend) — Modal Rakyat Indonesia

August 2019 – March 2021

- Built the customer-facing website and multiple internal tools for a regulated peer-to-peer lending fintech, reporting directly to the CTO and Product Manager.

- Worked across React.js, Vue.js, Nuxt.js, and SASS to deliver business-critical user flows.
- Operated within a customized Agile/Scrum process using Kanban, consistently delivering on time.
- Contributed to architectural decisions that improved scalability of internal operations systems.

Full Stack Engineer — Accelist Lentera Indonesia

March 2018 – February 2019

- Developed an enterprise-level web and mobile application for a national company, centralizing internal data across branches and dealers.
- Built the web application with ASP.NET Core 2.2, Vue.js, and SASS.
- Worked alongside a Project Manager, two Business Analysts, a Software Architect, and fellow developers in an Agile/Scrum process.
- Delivered the project with positive client reception and full feature acceptance.

Teaching Assistant — Software Laboratory Center, Bina Nusantara University

March 2016 – February 2018

- Selected as a member of BINUS' Software Laboratory Center, a competitive peer-teaching organization, after a multi-stage selection process.
- Taught programming and computer science fundamentals to undergraduate students through structured lab sessions.
- Developed instructional materials and graded coursework across multiple semesters.
- Built strong foundations in communication, mentoring, and explaining technical concepts clearly — skills carried into every engineering role since.

SIDE PROJECTS & ENTREPRENEURSHIP

Founder — Cuerank

cuerank.com · *January 2026 – Present*

- Founded and built from scratch a nationwide billiard matchmaking platform with an integrated trusted-player leaderboard system.
- Designed and shipped end-to-end with Next.js and Supabase, owning architecture, database design, authentication, and UI.
- Onboarded 10+ registered players in the first months post-launch, validating the matchmaking concept.

Founder — Bailey's Playhouse

baileysplayhouse.com · *April 2025 – Present*

- Founded and operate a dog boarding and daycare business based in BSD, Tangerang.
- Scaled to 100+ bookings and 40+ dogs served since launch, building and managing the booking website end-to-end.
- Demonstrates ownership, business operations, and full-stack product execution beyond day-job engineering.
